github.com/AbooSalh

Summary

Full-stack developer building production-ready web applications with TypeScript across the stack, from responsive UIs to scalable APIs and cloud-native deployment. Experience with monitoring, observability, and performance optimization.

Education

Alamein International University (AIU) — Alexandria, Egypt

Expected May 2027

Bachelor of Science (B.Sc.), Computer Science

– **Coursework:** Data Structures and Algorithms, System Design, Advanced Database Systems, Information Security

Work Experience

Full-Stack Developer

Jan 2025 – Present

Paradise Sharm Tours

paradisescharm.com

- Architected and deployed paradisescharm.com, a multi-language (EN/AR/RU/DE/IT) tour booking platform using Next.js, Express.js, MongoDB, and Traefik with automated SSL/TLS, serving 115 monthly active users across 6+ countries
- Built observability stack with Prometheus, Grafana, and k6 stress testing (up to 220 concurrent VUs, 2-hour soak tests); integrated Google Analytics, PostHog, and Plerdy for user behavior tracking across 289 users in the past year
- Optimized frontend to achieve 91 Performance, 100 Accessibility, and 92 Best Practices Lighthouse scores with 0.9s FCP and 0 cumulative layout shift; implemented RBAC, JWT with refresh tokens, rate limiting, and automated daily MongoDB backups with 7-day retention

Projects

Cairo Transportation Network | C#, .NET, Next.js, SQLite, EF Core

[Live Demo](#)

- Engineered a smart-city routing platform processing 35 locations and 74 roads across Greater Cairo using A* emergency routing (39% faster than Dijkstra, 40% fewer node expansions) and 0/1 Knapsack DP for maintenance budget optimization (42% improvement over greedy, serving 78.5% transit demand with 50 vehicles)
- Built a modular monolith ASP.NET Core REST API with IMemoryCache (1ms graph retrieval), Next.js interactive Leaflet map, and automated CI/CD via GitHub Actions, achieving 2ms average algorithm response time

E-commerce API | TypeScript, Node.js, Express, MongoDB, Stripe

[GitHub](#)

- Built a production-ready ecommerce REST API with 8+ modules (products, orders, cart, reviews, coupons) featuring Stripe payment integration with webhook handling and email verification flows
- Implemented BaseController pattern for DRY CRUD operations, JWT authentication with MFA-protected account deletion, and hardened security (Helmet, NoSQL injection protection, HPP, rate limiting, input sanitization)

Technical Skills

Languages: TypeScript, C#, JavaScript, Java, Python, SQL, HTML, CSS

Frontend: Next.js, React, React Query, SSR/SSG, TailwindCSS, Framer Motion, Radix UI

Backend: Node.js, Express.js, .NET, ASP.NET, REST APIs, RBAC, JWT auth, rate limiting

Databases: MongoDB, MariaDB, MySQL, PostgreSQL

DevOps: Docker, Docker Compose, Traefik, SSL/TLS, Cloudflare tunnel, Portainer, pnpm monorepo, Bash

Monitoring & Analytics: Prometheus, Grafana, k6, Google Analytics, PostHog, Plerdy

Quality: Jest, Supertest, SonarQube, Husky, ESLint, Prettier

Certifications

Engineering Practices for Building Quality Software — University of Minnesota

Hands-on Linux Commands & Shell Scripting — IBM

Relational Database Systems — UNAM

Introduction to Databases — Meta

Software Engineering: Software Design — HKUST

Leadership & Achievements

Technical Head

Apr 2026 – Present

AIU ICPC Community — Alamein International University (AIU)

- Designing and developing a Codeforces-style online training platform for AIU ICPC community with problem archives, live contests, real-time rankings, and user profiles

Achievements

Competitive Programming: 35 problems solved, 93.2% acceptance — leetcode.com/u/Unix69/
